## SUMMARY

According to WHO biosecurity measures it is a set of standards and measures to protect the health of staff, against biological, chemical and physical risks they are exposed in the performance of their duties, also to patients and the environment. This research study entitled "Knowledge of biosecurity professional nursing staff of the Emergency Service. Rebagliati Hospital, May to December 2014" aimed to: describe the level of knowledge on biosecurity professional nursing staff of the Emergency Service. Rebagliati Hospital, May to December 2014. Type of study: descriptive quantitative method, cross-sectional design. Sample 50 nurses working in the emergency service of the Hospital Rebagliati Martins adults. Instrument: Questionnaire knowledge of biosecurity measures being validated by expert judgment. Data were analyzed using the SPSS 22.0 program. Results and conclusions indicate that the majority of nurses service Emergency Hospital Rebagliati show an average level of knowledge of biosecurity. Similarly, professional nurses 26 to 35 years of age without training during the year, and who work for 5-10 years in hospital medium levels predominate knowledge of biosecurity measures.
